

Wir sind Partner

Good raw materials for better enjoyment

Produced from high-quality raw materials, our organic products offer a special taste experience. Our environmentally friendly produced sausage and snack products are packaged in an appetising and resource-saving way to meet the highest standards of quality, freshness and sustainability: as self-service items, cut into practical pre-pack or as a snack between meals. We largely avoid the use of additives in our organic products, and all of our organic raw sausage products (salami) are free of nitrite curing salts.

Bioland products

We have been a proud Bioland partner since March 2023 and have been able to develop trusted and proven recipes further, in accordance with the strict Bioland guidelines, and create our own Bioland products. For the production of which only high-quality certified Bioland raw materials are used. We are also happy to develop exclusive Bioland products together with you and for your customers.

Sustainable packaging concepts

When selecting our packaging concepts, we pay attention to use materials made from 100% recycled fibres. Our goal is to continue minimising the use of plastic-film until we achieve a full conversion to plastic-free packaging materials.
